Food Conveyors

Total Food Machines can supply a wide range of conveyor systems ideal for food production areas, all stainless steel for further information please feel free to give us a call

INDEXING CONVEYOR FOR LINE AUTOMATION

This range is manufactured in order to suit customers needs.

It is designed with the focus of hygiene and safety in mind.

Therefore, it will enable health and safety regulations to be met within your facilities.

Due to being manufactured from stainless steel, and food grade materials, it is a quality machine which is easy to clean, and furthermore increase production rates, as less time is spent on maintenance.

Indexing conveyor systems may be manufactured to suit a unique style of container, or with our adjustable conveyor system can be made to suit any number of different packaging types.

Indexing 'peg chain' conveyors to suit a range of packaging for 'start - stop' applications where depositing into stationary containers is required.

The versatility of this machine is clear as it can be manufactured to various heights and widths to suit individual applications and requirements.

Stainless steel peg chain, push bar & platen layout options available.

It has the ability to run continuously, allowing production to be consistent and efficient.

It has laser cut technology, along with a safety interlock that will guard and prevent access to moving parts, ensuring the safety of your employees during the production process.

Swivel locking castors also allow for ease of movement so the machine can be manoeuvred to suit your spatial needs and available capacity(Fixed location feet if required).

Motor gearbox or Servo motor drive options are also available.

Easi-Clean Elevator

The easi-clean elevators are designed and manufactured to meet customers requirements.

This machine is a high quality build as it is constructed from stainless steel and food grade materials.

It has a simple design, and requires no tools to stripdown the machine and allow it to be broken down into it's component parts.

Additionally the continuous PU flighted belt can also be removed.

Due to this, the ease of cleaning the machine is maximised, and can allow hygiene standards to be met in minutes.

Moreover, this model is very versatile as it can be manufactured to cater your individual process.

This is achievable due to customisable lengths and widths to best suit your needs. Additionally the height can also be adapted to suit various applications.

Safety is also a focus with the easi-clean elevators as the laser cutting system is protected and guarded to prevent access to moving parts by the safety interlocking system.

Therefore, ensuring the safety of those working with the machine and in the production process.

Equally, the use of swivel locking castors also add to the element of safety with this model, due to allowing the machine to be locked into place.

However, still enabling movement when required to suit your spatial needs. Fixed location feet can also be supplied if preferred.

PU Flat Belt Conveyor

Flat Belt Conveyor Track

This range of conveyors is designed to suit customers' needs for many applications.

It places emphasis on hygiene and safety, which is perfect to aid your facilities ability meet health and safety regulations.

Due to being constructed from stainless steel and food grade materials, the quality of build is high and cleaning time is reduced therefore, increasing efficiency.

Due to the adjustable conveyor system, it can be made to suit any number of different packaging types. Additionally, it can be manufactured to various heights and widths to suit individual applications. This highlights the versatility of this machine.

Laser cut, safety interlocked, guarding to prevent access to moving parts.

The swivel locking castors allow for ease of movement (Fixed location feet can be supplied if required).

The removable continuous PU flighted belt also allows for hygienic deep clean.
