

Screw Conveyors

At Total Food Machines we can supply a wide range of Screw Conveyors from N&N Nadratowski

Screw conveyors are used to convey bulk material from almost any position (vertical, horizontal, or at an incline) and are one of the most reliable methods of conveyance.

The screw conveyor is composed of a pipe with a welded steel strip that is formed into a continuous helix. The helix is referred to as the flighting.

Screw conveyors, feeders and dischargers based on Archimedean screw principles are an essential part of many storage and processing systems dealing with many materials.

They are commonly used for general movement and distribution of bulk materials.

N&N Nadratowski Screw Conveying machinery operates across the world in a wide variety of markets, from grains, feeds and foods to oilseeds, biomass, waste and minerals.

Screw conveyor handling capabilities.

In general, most free flowing meat, poultry fish, petfood, powders, grains and pellets, as well as many semi-free flowing materials, can be conveyed or discharged with an Archimedean screw system. We can offer many specifications to suit your application and we also offer standard screw conveyors tailored to suit your needs.

Please see a selection of N&N Nadratowski Screw Conveyors which can be used in many applications, abrasive materials, wet or sticky materials, materials prone to fluidisation, greasy, oily products, hot, cold, wet products
