

500 Litre Electric Scrape Surface Cooking Vessel

500 Litre Electric Scrape Surface Cooking Vessel

Total Food Machines supplies this high-capacity 500-litre electric scrape-surface cooking vessel for consistent and efficient batch production within commercial kitchens and food manufacturing facilities.

Manufactured in Europe by Kubasik, this robust stainless-steel cooking vessel is designed for producing soups, sauces, gravies, curries, stews, pie fillings, ready meals, meat products, vegetables, pasta, rice, preserves and many other cooked food products.

The electric heating system provides controlled and consistent temperatures throughout the cooking process. Scrape-surface agitation continuously moves the product across the heated vessel surface, helping prevent sticking, scorching and product damage.

Its large 500-litre capacity makes this industrial cooking kettle an excellent choice for manufacturers looking to increase production while maintaining consistent product quality between batches.

Main Features

- 500-litre cooking capacity
- Efficient electric heating
- Scrape-surface agitation
- Stainless-steel construction
- Automatic temperature control
- Mikster control system
- Integrated water-filling tap
- Hygienic product discharge
- Insulated vessel construction
- Easy-clean food-contact surfaces
- Suitable for viscous and particulate products

The vessel can be configured to suit different products and production requirements, with options available for mixing speeds, controls and product discharge arrangements.

Total Food Machines can assist with equipment selection,

production planning, delivery and installation.
