

CRM Self Stacking Burger Former

CRM Self-Stacking Burger Former

An Innovative Solution for Efficient Burger Production

The CRM Self-Stacking Burger Former is an intuitive and highly versatile machine designed to meet your food forming and portioning needs.

Engineered for ease of use, this machine ensures consistent, high-quality results when producing stacked burgers.

Capable of processing a wide range of ingredients—including meat, fish, potato, vegetables, ethnic foods, butter, cheese, bakery products, pet food, and confectionary

CRM Self-Stacking Burger Former offers flexibility in producing a variety of shapes and sizes to suit your specific product requirements.

Total Food Machines supplies the CRM Stelvio Self-Stacking Burger Former for efficient, automated forming, portioning and stacking of food products.

Its programmable touchscreen allows operators to select the number of burgers per stack, control spacing and save settings for different products.

The versatile CRM former can process meat, poultry, fish, potato, vegetables, ethnic foods, cheese, bakery mixtures and other formed products.

Consistent portioning and automatic stacking improve product presentation while reducing manual handling, labour requirements and production time.

Manufactured in Italy, the CRM Stelvio offers intuitive operation and flexible performance for food processors of varying sizes.

For more information on how the CRM Self-Stacking Burger Former can enhance your production process, please don't hesitate to contact us at Total Food Machines.
